
NAME

`parsort` - Sort (big files) in parallel

SYNOPSIS

`parsort` *options for sort*

DESCRIPTION

parsort uses GNU **sort** to sort in parallel. It works just like **sort** but faster on inputs with more than 1 M lines, if you have a multicore machine.

Hopefully these ideas will make it into GNU **sort** in the future.

EXAMPLE

Sort files:

```
parsort *.txt > sorted.txt
```

Sort stdin (standard input) numerically:

```
cat numbers | parsort -n > sorted.txt
```

PERFORMANCE

parsort is faster on a file than on stdin (standard input), because different parts of a file can be read in parallel.

On a 48 core machine you should see a speedup of 3x over **sort**.
